github.com/Sidd-0710

Computer Engineering student and full-stack developer building AI-powered products with React, Node.js, Express and Python (FastAPI, scikit-learn). Strong in REST API design, with hands-on experience in local LLM integration and end-to-end machine learning.

SKILLS

JavaScript · TypeScript · Python · React.js · React Native · Node.js · Express.js · FastAPI · REST APIs · MongoDB · pandas · scikit-learn · LLM Integration (Ollama) · Tailwind CSS · HTML5 / CSS3 · Git & GitHub · Deployment (Vercel, Render)

EXPERIENCE

Full-Stack Developer Intern · TTn Garage

Jun 2026 — Present

- Building full-stack features in React.js, Node.js, and Express.js — REST API integrations and responsive UI components.
- Working with the engineering team across debugging, testing, and deployment workflows.

Web Development Intern · Pionoor Tech

Sep 2024 — Nov 2024

- Shipped responsive, client-facing web pages in HTML, CSS, and JavaScript, improving usability across devices.
- Maintained live web applications through testing, debugging, and deployment.

PROJECTS

AutoValue — Used-Car Price Prediction

live ↗ github ↗

Python · pandas · scikit-learn · FastAPI · pytest · Render

- End-to-end ML app that estimates a used car's resale price in India with a confidence range, built on **40,440 listings** from CarDekho, Cars24 and Spinny (36,919 after cleaning).
- Tuned Hist Gradient Boosting, chosen from 9 algorithms by 5-fold cross-validation: **9.8% typical error, R^2 0.86** on unseen cars, with an 80% price range that covers 81% of them.
- Live on Render: a FastAPI + Pydantic API and hand-built web UI, tested with pytest.

Seatly — Restaurant Queue & Ordering Platform

live ↗

React · TypeScript · React Router · Tailwind CSS · Vitest · Puppeteer · Figma · Vercel

- Lead developer in a team of 4: designed **26 screens** in Figma, then built them in React.
- Diners see a live wait estimate before entering, then order and pay by UPI from a table QR; owners run the floor, queue, orders and inventory from one dashboard.
- Rule-based wait model with visit logging for a later ML phase; **38 unit + 33 end-to-end tests**.

Signal — AI-Powered News Aggregator

github ↗

React · Node.js · Express · Ollama (local LLM)

- Full-stack aggregator pulling live articles from **29 RSS feeds across 8 categories**.
- Local LLM writes 6-line summaries and Hindi translations: no paid APIs, data stays local.
- Source-credibility scoring (0–100), cross-outlet "compare sources" matching, English/Hindi text-to-speech, and a caching/fallback layer so per-feed failures never break the app.

EDUCATION

B.E. Computer Engineering

Nov 2022 — Present

Vishwaniketan Institute of Management, Entrepreneurship and Engineering Technology (iMEET)

ALSO

- Built and documented AutoValue and Signal solo; learning RAG and cloud (DevOps) next.
